

SQL PROJECT ON MUSIC STORE DATABASE

Objective of the Music Store Database Project

The objective of the Music Store Database project is to design and implement a comprehensive database system that efficiently manages and organizes data related to a music store's operations. This includes tracking customer information, sales transactions, inventory of music tracks, artists, albums, and genres. The database aims to provide valuable insights into customer preferences, sales trends, and inventory management, enabling the store to enhance its marketing strategies, improve customer satisfaction, and optimize inventory levels.

Queries to solve:

EASY LEVEL QUESTIONS:

1. Who is the senior most employee based on job title?
2. Which countries have the most Invoices?
3. What are top 3 values of total invoice?
4. Which city has the best customers? We would like to throw a promotional Music Festival in the city we made the most money. Write a query that returns one city that has the highest sum of invoice totals. Return both the city name & sum of all invoice totals .
5. Who is the best customer? The customer who has spent the most money will be declared the best customer. Write a query that returns the person who has spent the most money.

MODERATE LEVEL QUESTIONS:

1. Write query to return the email, first name, last name, & Genre of all Rock Music listeners. Return your list ordered alphabetically by email starting with A.
2. Let's invite the artists who have written the most rock music in our dataset. Write a query that returns the Artist name and total track count of the top 10 rock bands .
3. Return all the track names that have a song length longer than the average song length. Return the Name and Milliseconds for each track. Order by the song length with the longest songs listed first.

ADVANCE LEVEL QUESTIONS:

1. Find how much amount spent by each customer on artists? Write a query to return customer name, artist name and total spent .
2. We want to find out the most popular music Genre for each country. We determine the most popular genre as the genre with the highest amount of purchases. Write a query that returns each country along with the top Genre. For countries where the maximum number of purchases is shared return all Genres.
3. Write a query that determines the customer that has spent the most on music for each country. Write a query that returns the country along with the top customer and how much they spent. For countries where the top amount spent is shared, provide all customers who spent this amount.

Conclusion and Learnings

In conclusion, the Music Store Database project has been a valuable experience in applying SQL to manage and analyze data. Through this project, I learned how to retrieve, filter, and aggregate data, join tables, use subqueries, and maintain data integrity. I also gained practical skills in ensuring data consistency with transactions. This project has enhanced my SQL knowledge and provided insights into real-world database management.
